

## DANISH AGRO INDUSTRY | BIOMASS BOILERS

ALCON IS AN EXPERIENCED DEVELOPER & MANUFACTURER OF BIOMASS BOILERS.

*With a company history of more than 40 years, Alcon is experienced in producing and continuously developing heating plants using wood as fuel – also known as biofuel plants. Alcon is furthermore specialized in producing of costumer specific heat-plant solutions.*

### COMPANY PROFILE

Launched by the global energy-crisis in the late 1970's, Alcon was founded on the principle of developing products for the market of alternative energy sources. The balance between functionality, efficiency and economy lays the foundation upon which the heating plants are constructed and ensures top tier products. Furthermore, the use of modern computer technology is implemented in the boilers and enables easy handling and managing of the specific products. The company closely cooperates with specialists, who can ensure complete mounting and servicing of every installment.

### PRODUCTS

Alcon's productline consists of a grand variety of heating plants. Specialized in heating plants for straw, the company offers products that will feed every need of the costumer – in size, shape and functionality. Should it be the case that one requires a unique installment, Alcon gladly produces consumer specific solutions.

Besides the wide array of own-manufactured plants, Alcon also deals used boilers and products.

The product range consists of:

- Straw boilers
- Biomass boilers
- Lock Wood boiler
- Stoking plants
