

DANISH AGRO INDUSTRY | STABLE SOLUTIONS

One2Feed manufactures fully automated feeding system to dairy farmers. The system was introduced to the market in 2008 and has proven its value to dairy farmers at a global level. One2Feed is interested in partnering and supplying fully automated feeding systems that provide flexibility, efficiency in feeding and use less labor.

COMPANY PROFILE

One2Feed produces a Danish designed and manufactured fully automated feeding system. The construction is based on durable proven technologies and components, requiring an absolute minimum of service and maintenance. In 2008, the One2Feed automatic feeding system was introduced to the market. Since then the system has proven its value to dairy farmers at a global level, saving labor and optimizing profitability. One2Feed's ambition is to offer a system contributing to the earnings of the farmer and at the same time offering the versatility to plan the daily work independently of the feeding routines.

PRODUCTS

One2Feed is based on decades of experience with equipment operating on dairy farms and a commitment only to use proven technologies in One2Feed allows One2Feed to offer a durable efficient and high capacity feeding solution to dairy farmers at a global level. One2Feed believes that traditional feeding is time-consuming but is the most important and demanding job on a dairy farm. Optimal feeding requires precision and regularity which becomes easier with One2Feed. In addition to saving labor, One2Feed contributes to reducing negative environmental impact by reducing the loss of feed and by reducing the amount of fuel consumed during the feeding process.

The project range consists of:

- Roughage Hopper
- Feeding mixer
- Control systems
