

## DANISH AGRO INDUSTRY | STABLE SOLUTIONS

*Clena is a Danish manufacturer of both simple and mobile high-pressure cleaners as well as large customized industry models.*

# CLENA

### COMPANY PROFILE

Clena has more than 40 years of experience in the high-pressure industry and they are currently supplying machines to loyal business clients throughout Scandinavia, Eastern Europe and Asia. The company supplies a wide variety of industries including agriculture, food suppliers, building sites, and iron/metal productions. All the machines are all built with the same simple method, ensuring a long lifecycle and high reliability. The machines are intuitive and easy to use and are all built with powerful quality components. They produce workhorses instead of “models”, because functionality and reliability are their top priority.

### PRODUCTS

Clena’s mission is: “To set the standard for the industry’s most functional and reliable high-pressure systems”. For that purpose, they have a large range of standardized machines that are mainly used in agriculture and industrial industries. However, they also offer specially designed high-pressure systems, produced by their experienced engineers.

The machines are exclusively based on quality components, with the industry’s top pumps from Italian HAWK as the core element, which all have ceramic pistons, stainless steel valves, and brass cylinder heads. The skilled employees design, build, and test all the machines in their spatial production rooms in Tistrup, Denmark.

The product range consists of:

- Clena model KA/KB
- Clena model KM
- Clena model KV
- Clena model KX
- Clena model KS-KH
- Clena model HV
- Clena model HB
- High Pressure Trailers from Meclean
