

DANISH AGRO INDUSTRY | STABLE SOLUTIONS

KVK Hydra Klov is a modern company devoted to engineering and manufacturing hoof care and hoof-trimming equipment.

KVK HYDRA KLOV
- part of the GRANLY GROUP

COMPANY PROFILE

KVK Hydra Klov is a Danish company founded in 1969. Since then, the simple original set-up has been consistently reengineered, and today's products are highly efficient and fitted with hydraulics. KVK's customers are assured of the benefits of more than 40 years' work with hoof-trimming chutes. The chutes are developed to withstand high loads in tough environments.

KVK has been a part of Granly Group since 2009 and works closely with Granly Steel A/S, which is famous for its high-quality products and precision delivery.

Today, many KVK products are used internationally - from Northern Norway and Iceland to Saudi Arabia and Dubai, from Canada to Japan.

PRODUCTS

Livestock with correctly trimmed hoofs are healthy and strong. Therefore, KVK's hoof trimming chutes provide optimum working posture for the trimmer and minimum discomfort to the livestock. They ensure that cows balance correctly on all four hoofs and soles, preventing damage to the horn tissue. To keep the livestock healthy, the farmer must check hoofs regularly and trim them as necessary to ensure optimum comfort and yield.

KVK offers different types of both hoof-trimming chutes, lead-in pens and trolleys. The company produces two series of hoof-trimming chutes: Model 650 and model 800, enabling the customer to get the ideal solution.

The product range consists of:

- Hoof-trimming chutes, model 650
- Hoof-trimming chutes, model 800
- Bull chute
- Lead-in pens, model 200
- Lead-in pens, model 500
- Lean-in gates
- Trolleys
