

DANISH AGRO INDUSTRY | BIOMASS BOILERS

TwinHeat is a 100% Danish producer of biofuel burner systems for wood pellets, wood chips, grain and wood shavings.

COMPANY PROFILE

All TwinHeat production and development takes place in Denmark. TwinHeat is medium-sized company that is constantly evolving. The products are sold on the Danish market through wholesalers and installers, and abroad through importers and agents.

The company is owned by Esben Pedersen and Søren Vasegaard. They also lead and run the company on a daily basis and they have optimized and increased the wide product line with various bio fuel systems as well as fully automated silo systems. TwinHeat is known to use most types of biofuels as wood pellets, wood chips, grain, wood shavings, etc.

TwinHeat sells the products on the Danish market through wholesalers and installers, and abroad through importers and agents.

PRODUCTS

The company is continuously developing the product line which today makes TwinHeat a leader in developing and manufacturing of biofuel burner systems for home and industry. The systems range from 10 - 250kW.

As a result of the development process, TwinHeat now offer a mobile boiler system solution which can be connected to the existing heating system. All that is required is space for the mobile unit and silo and appropriate entries to the water and electrical connections.

The product range consists of:

- Compact Systems
- Combi Systems
- Industrial Systems
- Silos and Auger Conveyors
- Accessories
